WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

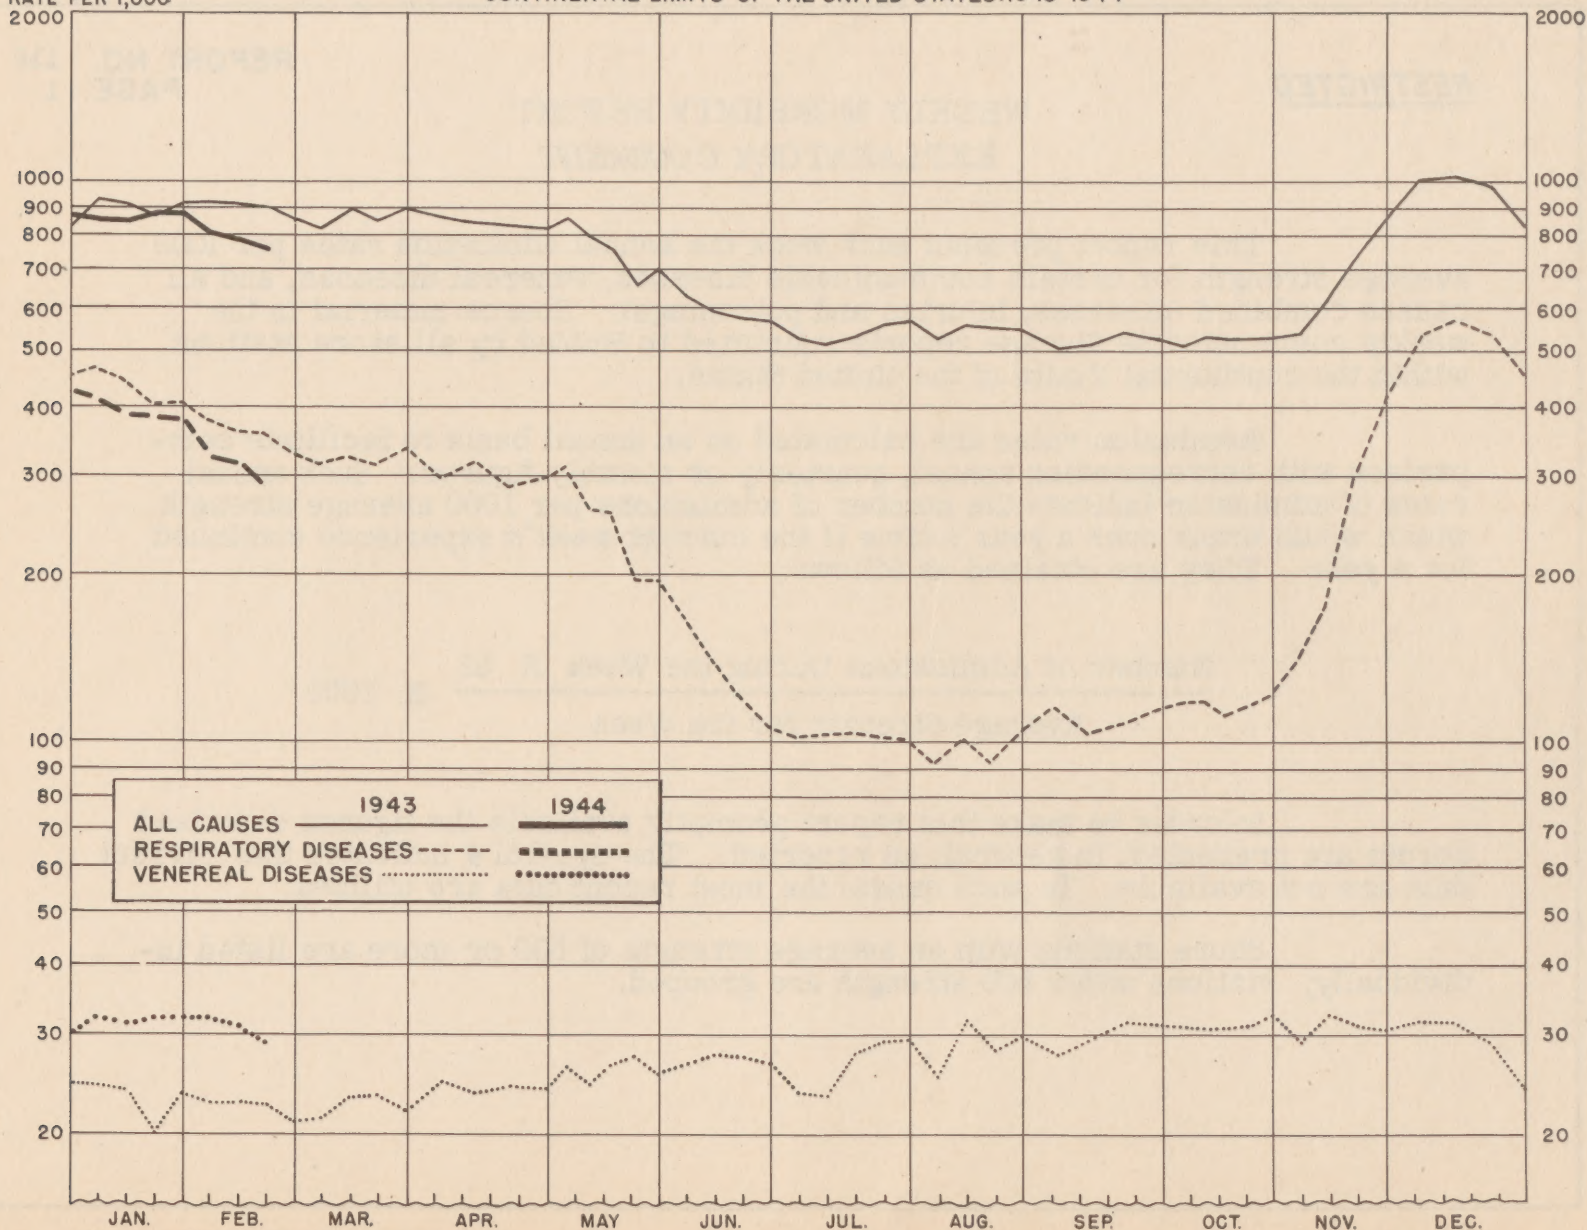

FIGURE 1

ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS
FOR CERTAIN RESPIRATORY DISEASES*, VENEREAL DISEASES, & ALL CAUSES,
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 112
PAGE 2

RESTRICTED

RATE PER 1,000

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

WEEK ENDING FEBRUARY 19TH

The curve representing admissions to the sick list for all causes (see Fig. 1), contrary to the experience of 1943, has consistently fallen for the past 3 weeks. Even sharper has been the contrast between the 1944 and 1943 experience with the respiratory diseases. In spite of the addition of tonsillitis and pharyngitis acute to this group in 1944 the seasonal decrease for the respiratory infections is more rapid in 1944 than in 1943. The venereal disease rate, for the first time in 1944, has fallen below 30; it still, however, remains above the rate for the corresponding week of 1943.

Influenza and Catarrhal Fever. The downward trend of these infections has been consistent since the peak reached in the week ending Dec. 11, 1943. The rate of 201 for this 8th week of the year is well below that of the corresponding week for both 1942 and 1943. The highest rate for the week was recorded for the 9th District and the lowest for the 7th District. The curve either flattened or turned downward in all Districts except the 8th and in this District the rise was but slight and on a curve of comparatively low level.

Pneumonia--Broncho and Lobar. After 6 weeks with a rate around 6, the pneumonia rate for this week dropped to 5. This is below the rate for the 8th week in 1943 and approximately the same as the rate for the corresponding week of 1942. The highest rate, 20, is again reported for the 13th District; the lowest rate, 1, for the 3rd District.

Pneumonia, Atypical. For the fourth consecutive week the rate for atypical pneumonia remains about 4. Only for a short period of 4 weeks (in the month of December) did the rate rise above 4 throughout the whole year of 1943. It is therefore obvious that though the curve for this infection has flattened out it is still at a relatively high level. The rate for the corresponding week of 1943 was only 2. The highest rate was again reported by the 11th District. Though the rate of 16 for the 11th District is high it represents a considerable drop from the peak rate of 62 reported for this district for the week ending January 15. The 13th District reports no cases of this infection this week.

CURRENT TRENDS-- CONTD.

Rheumatic Fever, Acute. Though the incidence of this infection is slightly less this week, the curve still stands at a comparatively high level. The 13th District reports a rate of 23, the highest for any District. The 7th District reports no cases.

Scarlet Fever. The rate for scarlet fever has fallen for the 4th consecutive week and now stands at 14. This is, however, a rate well over the rates for the corresponding weeks of 1942 and 1943 and just below the 4-week peak of 1943 (reached in December, 1943). The highest incidence was recorded in the 13th, 9th and 6th Districts, respectively. Though the rate of 44 in the 13th District is high it represents a great improvement over the rate of 152 reported for that District for the week ending January 1, 1944.

Cerebrospinal Fever, Meningococcic. The incidence of this infection continues for the third week around 1. This rate remains intermediate between the lower rate of 1942 and the higher rate of 1943 for the 8th week of the year. The 9th Naval District reports the highest rate, 3. The 7th and 12th Districts report no cases.

Malaria. The curve for this infection, which had been decreasing for the past 3 weeks, leveled off this week with a rate of 3, well above the rates for the corresponding weeks of the years 1942 and 1943. The highest rates are reported for the 11th and 12 Districts (almost 5 times any other District), the lowest for the 8th and 9th Districts.

Measles. The rate for measles continues high, around 18. This rate, however, is still below the seasonal peak rate reported in 1942 and 1943. The highest rate, 39, is reported for the 9th District and the second highest rate, 30, for the 13th District. The 4th District reports no measles.
